# Ordering Notes and important information – Retro-Fit Pool Lights

## Ordering Notes

Before ordering the highlighted recessed retro-fit lights (appearing on pages 6-9), please note:

**Astral Delta and ARC Delta Multi-Colour LED light** must be disconnected from the Astral Delta Pool Light Controller. A new 12v AC transformer must be installed. **ARC Fixed-Colour LED light** must be disconnected from the existing 12v DC transformer and a new 12v AC transformer must be installed.

Before ordering, contact Aqua-Quip for a spec sheet.

**Lumascope** Retro fitting into a Lumascope housing relies upon:

- The original Lumascope stainless steel cover (OD 132mm) being retained and used.
- The original Lumascope light being attached to the housing using two screws.

If the 132mm stainless steel cover is not on site and/or the Lumascope light is mounted to the housing tabs with just one screw, contact Aqua-Quip.

**Aqua De-Light** The existing 12v DC transformer must be replaced with a 12v AC transformer. For the concrete model, the existing Aqua De-Light “gimbal” must be removed prior to fitting the Adaptor Plate and new pool light. If the gimbal is glued in and cannot be removed, please contact Aqua-Quip.

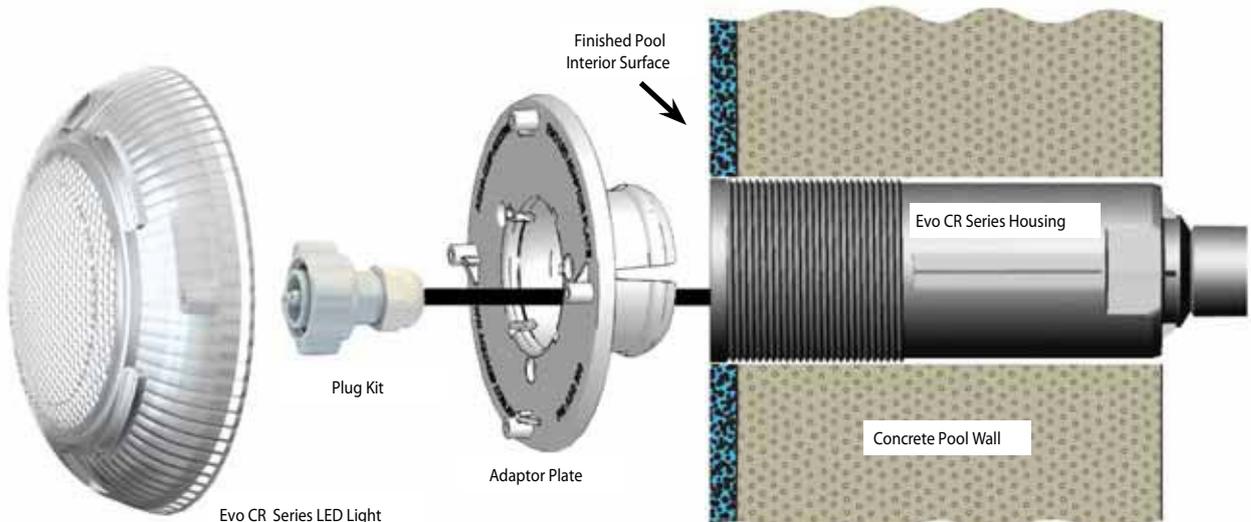

## EvoCR Series LED Light

The Evo CR Series LED Light has been developed for renovators of concrete pools. The Housing is supplied with a 25mm conduit fitting attached to the rear of the housing and a 25mm/20mm reducer. The housing has a narrow diameter of just 60mm and is inserted and sealed into a hole that is coredrilled through the pool wall.

The press-fit adaptor plate allows for angular and depth adjustment and simply glues into the housing after the pool interior surface has been applied. The low profile LED light is then connected to the waterproof plug kit on the cable and screwed onto the adaptor plate.

Order Codes for Evo CR LED Lights, with 20m cable:

### DISCLAIMER FOR ALL RETRO-FIT LIGHTS

Aqua-Quip accepts no responsibility for the incorrect operation or installation of any of the Retro-Fit lights where:

- the original cable, cable joins or transformer are faulty
- the original light/housing/mounting ring has not been installed to the manufacturer's specifications.

**Please note:** Installing Aqua-Quip Multi-colour Retro-Fit LED Lights in-line with other brands of existing multi-colour LED lights will result in unsynchronised colour programming.
